

Project Design Phase

Problem – Solution Fit Template

Details	Information
Date	15 February 2025
Team ID	_____
Project Name	Online Event Management System
Maximum Marks	2 Marks

1. Problem

Managing events manually can be difficult for participants, event organizers and administrators. Participants may have difficulty finding event information, registering for events and tracking their registrations. Event organizers may have difficulty managing event details and participant information. Administrators may also find it difficult to maintain records and generate reports.

2. Target Customers / Users

- **Participants** – people who want to find and register for events.
- **Event Organizers** – people who create and manage events.
- **Administrators** – people who manage the overall system, users, events and reports.

3. Customer Problems

Customer/User	Problem
Participant	Difficulty finding event information in one place.
Participant	Manual or inconvenient event registration.
Participant	Difficulty tracking registration status and payment details.
Event Organizer	Difficulty managing events and participant information manually.
Administrator	Difficulty maintaining user, event and registration records.
Administrator	Difficulty generating reports from manually maintained data.

4. Proposed Solution

The **Online Event Management System** provides a centralized platform for managing events digitally. Participants can register, log in, view available events, register for events, make payments and track their registrations. Event organizers can create and manage events and view participants. Administrators can manage users, events, registrations, payments and reports.

5. Problem–Solution Fit

Problem	Proposed Solution	Expected Benefit
Difficulty finding event information	Provide an online event listing	Users can easily view available events.
Manual event registration	Provide online event registration	Saves time and reduces manual work.
Difficulty tracking registrations	Provide a participant dashboard	Participants can check their registration status.
Difficulty managing participants	Organizer participant management	Organizers can easily view registered participants.
Manual record maintenance	Centralized database	Information can be stored and retrieved efficiently.
Difficulty preparing reports	Automated reports	Administrators can obtain event and registration information more easily.

6. Value Proposition

The **Online Event Management System** provides a convenient and centralized platform that simplifies event discovery, registration, payment and event administration. It reduces manual work, organizes information in one place and improves communication between participants, organizers and administrators.

7. Existing Situation → Improved Situation

Existing Situation:

Manual Event Management

Scattered Information

Manual Registration

↓
Difficult Record Maintenance
↓
Time-Consuming Reports

With Proposed Solution:

Online Event Management System
↓
Centralized Event Information
↓
Online Registration & Payment
↓
Centralized Database
↓
Easy Management & Reports

8. Conclusion

The proposed **Online Event Management System** addresses common difficulties in event management by providing a single digital platform for participants, event organizers and administrators. The solution matches the identified problems by making event information, registration, payment and management more organized and accessible.
